# Escalier Limon classique Métal - Quartier intermédiaire

#### **Conseils Préalables**

#### Montage

Porter des gants.

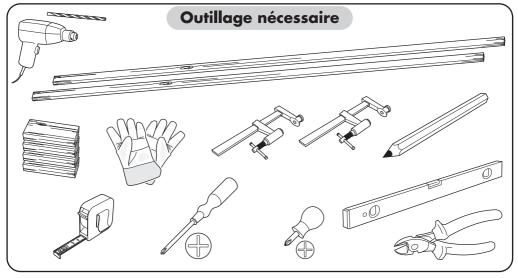

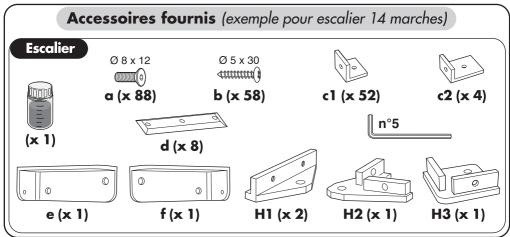

- L'installation de l'escalier sera grandement facilitée en utilisant des piges et des serre-joints.
- Les fixations pour mur, sol et dalle ne sont pas fournies, elles dépendent du type de support.
- Il est nécessaire d'avoir un mur porteur du côté sans rampe de l'escalier, pour sa fixation.

#### Kit de retouche

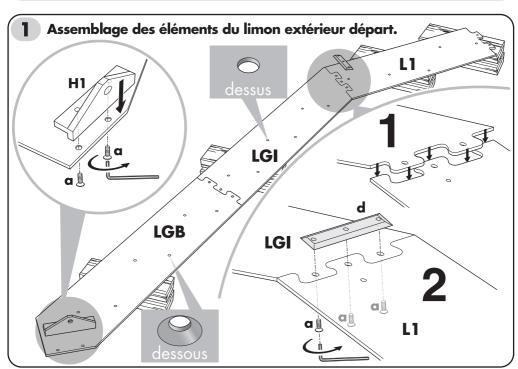

Débarrasser préalablement le pinceau du trop plein de peinture en l'essuyant sur une feuille de papier avant d'appliquer la retouche.

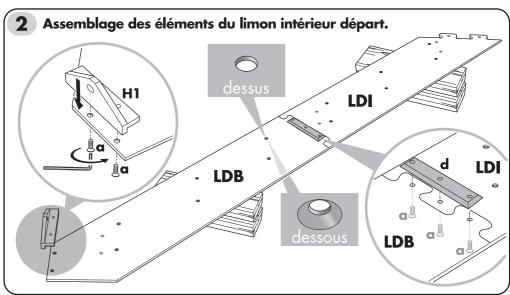

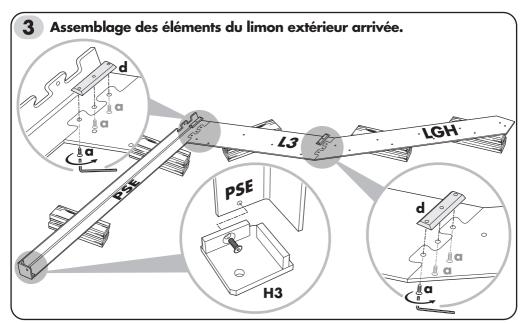

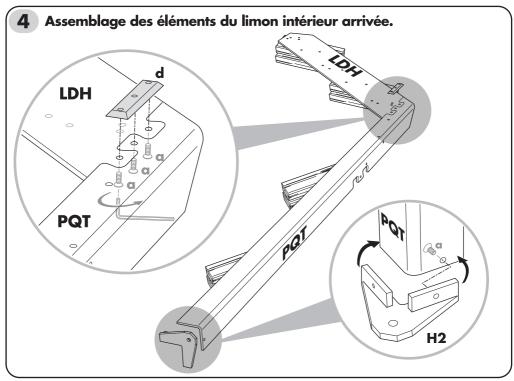

# Préparation et pose de l'escalier

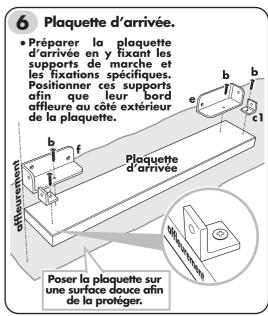

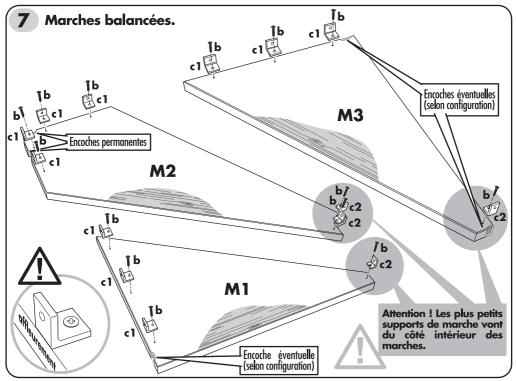

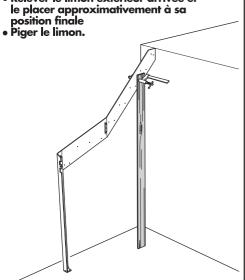

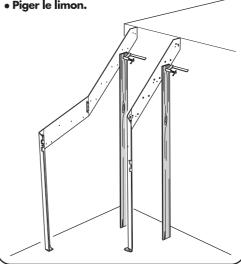

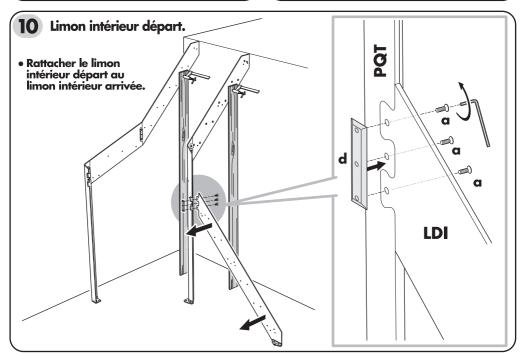

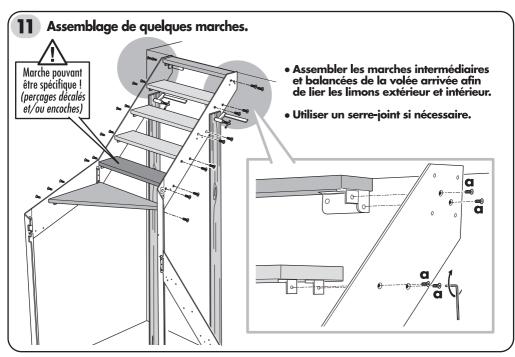

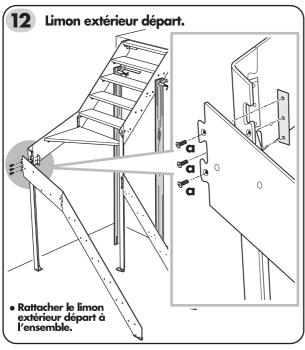

### Limon intérieur arrivée.

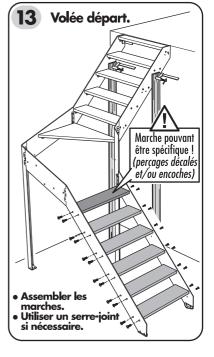

- Relever le limon intérieur arrivée et le placer approximativement à sa position finale.
- Piger le limon.

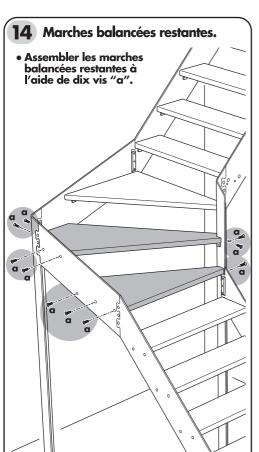

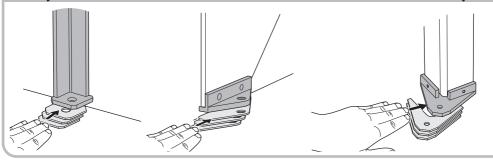

15 Repérage au sol et au mur.

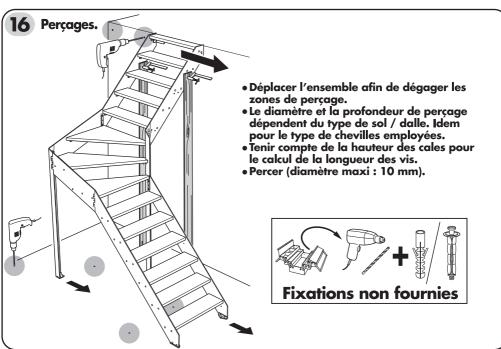

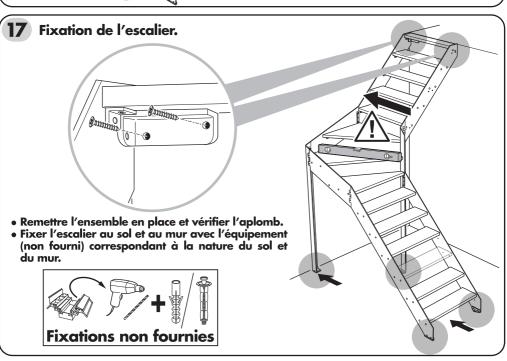

- Déplacer l'ensemble à sa position finale.
  Retirer les piges gênantes (au besoin,
- elles peuvent être placées sous les supports de marche).
  Relever les positions de perçage au sol et au mur après avoir mis l'ensemble de niveau.

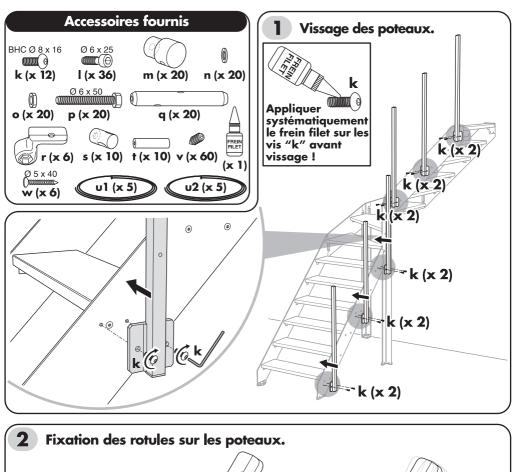

### AJUSTEMENT DE LA HAUTEUR PAR AJOUT DE CALES (UNIQUEMENT POUR UN MODELE STANDARD)
