Information sur le stockage et la mise en œuvre des escaliers

Escalier à usage intérieur, pour maison individuelle à trafic faible.

1. Influence de l'environnement, mesures de protection

- Les escaliers préfabriqués seront entreposés dans un endroit protégé et aéré, maintenant une température et une hygrométrie constantes.
- Les escaliers sont prévus pour un milieu sec, c'est-à-dire une température de 20°C et une humidité relative ambiante ne dépassant pas 65%.
- L'escalier doit être protégé avant la pose, dans les 15 jours suivants la date d'achat, et entretenu avec un vernis vitrificateur.

2. Mise en œuvre

- Les escaliers doivent être mis en œuvre dans une pièce saine, sèche (plâtre et dalle secs), ventilée, sur sol sec et fini, ainsi que d'éviter les contacts avec des matériaux humides.
- Les escaliers ne peuvent en aucun cas être placés lorsque les conditions sont de nature à risquer le voilement ou le retrait des parties en bois de l'escalier.
- La mise en œuvre des escaliers doit suivre les normes et réglementations applicables, et en particulier le DTU en vigueur NF DTU 36-3 Travaux de bâtiment — Escaliers en bois et garde-corps associés.
- Le respect de ces normes implique que la pose d'un escalier n'est pas un acte anodin, par conséquent le poseur doit être de préférence un professionnel ou bien un bricoleur averti, rompu à la mise en œuvre des menuiseries.
- La personne ayant la charge de la pose veillera à ce que, après leur mise en œuvre, les escaliers soient dûment protégés contre les dégradations et l'encrassement pendant la durée des travaux de construction.

3. Utilisation

- L'escalier doit être utilisé normalement et sans avoir subi de modifications.
- Toute conséquence d'une mise en œuvre de nos produits sur un chantier qui ne respecte pas ces spécifications ne saurait nous être imputée.

Information sur le remplissage

Avec votre balustrade un panneau de protection doit être assemblée.

C'est un élément essentiel à votre protection ou celle de vos proches, vous devez le poser.

Retirer le plus rapidement possible les protections plastiques sur les remplissages.

Ne pas employer de produit agressif pour le nettoyage des remplissages, utiliser uniquement de l'eau et du savon ainsi qu'un chiffon doux.

1 journée 1/2*

3 personnes

Montage

- Porter des gants.
- Les fixations pour sol et dalle fournies sont à adapter en fonction du type de support

*à titre informatif la durée peut varier en fonction des configurations du chantier.

Couper la main à la longueur souhaitée

S22

S23

Faire attention lors de la manipulation de l'eau chaude et protéger le sol des éclaboussures ou écoulements

Couper la main à la longueur souhaitée

Placer et fixer la main sur les supports à l'aide de ruban adhésif un support sur deux avant de la remplir d'eau

S24

1. Mettre du ruban adhésif autour du bouchon pour éviter l'écoulement de l'eau

S25

2. Attendre que l'eau refroidisse avant d'évacuer l'eau par le bas dans un seau, retirer lentement le bouchon pour évacuer lentement l'eau en raison de la pression importante
